

MUHAMMAD DANIYAL QURESHI

✉ mdzq2005@gmail.com ☎ +92-320-9588124 📍 Lahore, Pakistan 🔗 Daniyal Qureshi 🐙 dnq-codes

👤 Objective

Computer Science undergraduate with interests in Cybersecurity, DevOps, DevSecOps, and Frontend Development. Possesses a solid foundation in programming, networking, database systems, Linux environments, and web technologies. Seeking opportunities to apply technical knowledge through internships, projects, and practical learning while developing expertise in secure software development, cloud technologies, and information security.

🎓 Education

BS Computer Science, <i>Faculty of Computing & Information Technology (FCIT), University of the Punjab</i>	2024 – Present Lahore, Pakistan
Intermediate FSC/Pre-Medical, <i>Punjab Group of Colleges</i>	2021 – 2023 Lahore, Pakistan

📁 Projects

DevSecOps Roadmap Tracker 🔗

A full-stack 95-day DevSecOps + AI/ML roadmap tracker built with the assistance of Google AI Studio, featuring daily task tracking, streaks, progress analytics, and automated scheduling.

Network Monitor 🔗

Real-time network packet sniffer built with C++ and Npcap. Captures live TCP/UDP/ICMP traffic from your network interface and displays it on a web dashboard with filtering and live stats (WireShark inspired).

Flappy-Bird 🔗

A 2D Flappy Bird clone built in C++ with Graphics.h, implementing game loops, collision detection, score management, and persistent leaderboard functionality.

Food Chain Reservation Database 🔗

A SQL-based Restaurant Reservation System database designed with ERD, normalization, stored procedures, triggers, views, and indexes to support efficient reservation and branch management.

🧠 Technical Skills

- **Programming Languages** — C/C++, python, Assembly
- **Operating Systems** — Windows, Linux (currently studying The Linux Command Line by W. Shotts)
- **Database Management** — SQL, PostgreSQL, MongoDB, DBMS
- **Frontend Technologies** — HTML, Tailwind, JQuery, Ajax (Restful), Web Performance & Debugging
- **Networking & Security Tools** — Wireshark, Burpsuite, x64 dbg
- **Penetration Testing** — Nmap, Npcap, Burp Suite
- **Web Security** — SQL injection, XSS, CSRF, file inclusion, brute-force attacks (DVWA)
- **Exploitation** — Buffer overflow (stack-based), shellcode injection, EIP control, basic memory exploitation
- **Threat Modelling** — STRIDE framework, attack surface mapping, risk identification and mitigation
- **Miscellaneous** — Canva, Photoshop, Adobe illustrator, Ms Office, Vibe Coding, Prompt Engineering

📖 Courses

The Structured Query Language (SQL), *University of Colorado Boulder (Coursera)*

Introduction to Object-Oriented Programming in C++ 🔗, *University of London (Coursera)*
